

The Deal

We build your platform for you to keep

We can address the needs of any organisation - with custom-built collaboration platforms. We'll build and rig it up for you. Once done, you independently host both tools and data.

Your own custom-built platform replaces external third-party software and services. Video conferencing with chat, online office, file-storage, integrated email, calendar and many other tools.

Only you should own your data

Many third party tools and services are closed source, bloated with tracking and ads. And more importantly - "your" data is actually not even yours. We can give it back to you.

Keep your data on your own server. Or use Swarm's encrypted surveillance-free decentralised blockchain-based solution. What is gained? Unmatched data safety and freedom from limiting third-party dependencies.

The Build

Collaborative platform on a safe self-hosted server

Nextcloud-Swarm integration

Decentralised file-storage connected to the Blockchain

Customised Platform

by MetaProvide

The Tools

Web3 Storage

Here are a handful of central tools.

But we can add over a 100 more - depending on your specific needs.

Your files can be kept on you own server. Or on Swarm's Decentralised External Storage, connected to the blockchain. Therefore, even if your server/backups are lost, all your data remains safe in the secure encrypted Swarm-cloud.

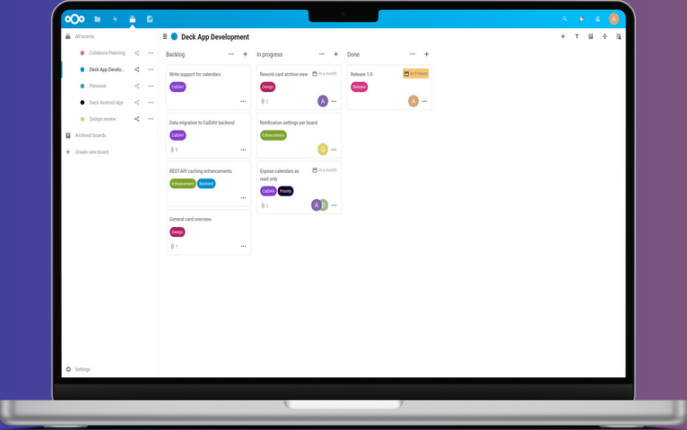

Video Conference and Chat

Communicate 1-to-1, in groups, with private-public options. Make password-protected calls, screen share, integrate with other platform apps.

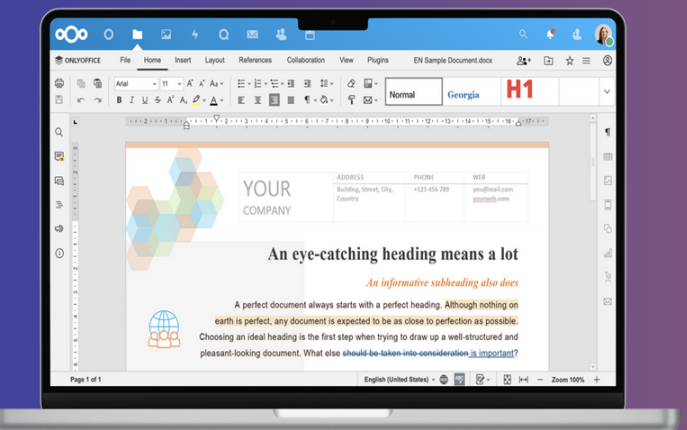

In many cases bridges can be used to connect to other services:

Discord | Gitter | IRC | Keybase | Matrix | Mattermost | MSTEams | Rocket.Chat | Slack | Telegram | Twitch | WhatsApp | XMPP | Zulip | VK |

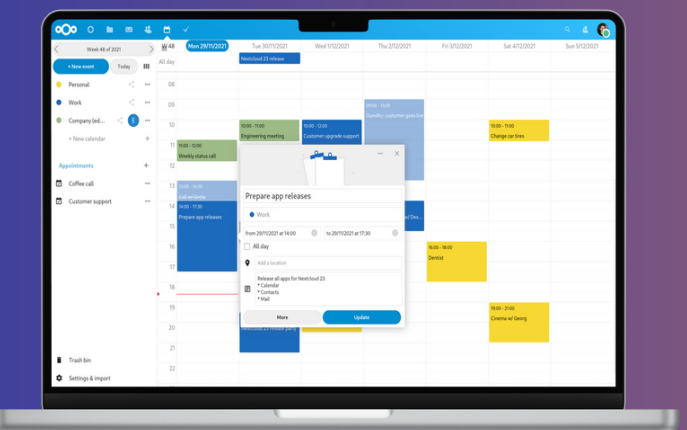

Kanban Deck

Kanban style organisation tool aimed at personal planning and project organisation for teams: add and order cards, add additional notes, assign labels, share them with the team, attach files, make comments and keep track of changes. Get your project organised.

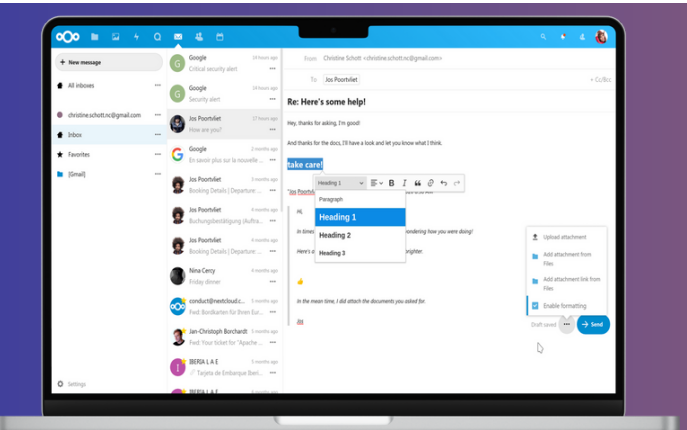

Online Office

Online Office allows you to view, edit and collaborate on text documents, spreadsheets and presentations within your platform. Multiple users can co-author documents in real-time from a familiar web interface, auto-saving all changes back to your file storage. Its greatest strength is good compatibility with all Microsoft document formats, but Open formats are also supported.

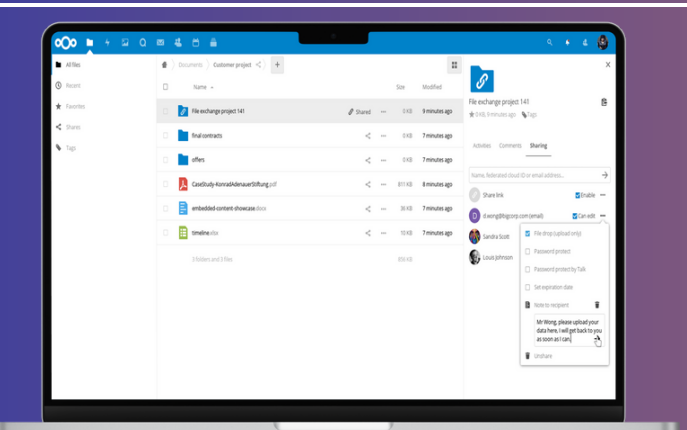

Calendar

Easily sync events from any device with your platform and edit them online: WebCal Support, invite people to your events, check attendees' availability, get alarms for events (browser and email), find your events and see tasks with a due date.

Email

Supports multiple mail accounts (personal and company accounts), connect any IMAP account, send & receive encrypted mail and host your own mail server.

File Sharing

This mobile and desktop system allows users to sync and share files, in a fully secure way through an encrypted connection. Supports End-to-end Encryption for the ultimate security of enterprise data. Public links to files are easily created and shared.
